## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-46, drawn to a method of determining a capacitance for use in a circuit simulation including simulation apparatus, classified in class 703, subclass 14+.
- II. Claims 47-49, drawn to an apparatus in part designed using circuit simulation, classified in class 257, subclass 499+.

The inventions are distinct, each from the other, because of the following reasons:

Inventions I and II are related as product made and process of making a product. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product, or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). In the instant case, unpatentability of the Group II invention would not necessarily imply unpatentability of the Group I invention, because the apparatus of the Group II invention could be made by a process materially different from that of the Group I invention. For example, the method prescribed in claim 1 can be materially altered by determining the required capacitance based on analytical determination of the design parameters from first principles or any means other than simulation of both test and design structures.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

Furthermore, this application contains claims directed to the following patentably distinct species of the claimed invention: a first embodiment (Figures 2-3; see section [0026]); a second embodiment (see section [0035]); a third embodiment (Figures 4-5; see section [0036]); a fourth embodiment (see section [0047]); a fifth embodiment (see section [0048]); a sixth embodiment (see section [0049]); a seventh embodiment (see section [0054]); an eighth embodiment (see section [0087]); and a ninth embodiment (see section [0088]).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
